

# Designing for Safety: The Importance and Use of Prevention through Design

*Thursday, February 17, 2022, 1:00 p.m. EST*

On 2/17/2022 at 1:00 p.m. EST, the SMCX will host the “Designing for Safety: The Importance and Use of Prevention through Design” webinar.

This webinar focuses on identifying the scope of prevention through design in your workplace, the benefits derived from properly integrating it into your safety management system (SMS), and how to identify key personnel to include in your prevention through design process. The webinar also provides information on what to do when prevention through design deficiencies are identified as well as actual examples of incidents resulting from SMSs with poorly integrated prevention through design criteria.

This intermediate-level webinar will be beneficial to personnel wanting to learn more about the scope and impact of workplace design criteria in preventing mishaps, injuries, and loss. Attendees should have a fundamental understanding of general design requirements for safety and health related operations and processes in the workplace prior to this webinar. Personnel gaining the most benefit from this presentation may include: Safety and occupational health professionals, preventive maintenance personnel (e.g., facilities, engineering and equipment management, public works), and process development and S&H teams.

Please click the article headline or registration link [here](#) to register for this FREE webinar.

***NOTE: We will be capping attendance at 100, so be sure to register early!***
